Progeos Tips

Technical Cost Savings

Progeos' services save thousands of dollars in software costs and hardware support

In a municipality, software, hardware and support for the variety of systems being used can become an expensive item in the budget. The following describes some of the significant cost savings that can result from using online Progeos services.

Software Savings

Traditional desktop software packages often charge based on the number of seats being used. This approach can lead to higher costs when more users need to use the software. For example, a municipality may be spending three to five thousand dollars per seat each year for municipal software. This may limit use of the software to less than ten users. Progeos charges a flat fee and unlimited use for each module that is purchased based on the size of the municipality.

Progeos services integrate both data and processes across departments. A municipality can shed GIS licenses that were supporting older software or other older municipal software formats, possibly saving thousands of dollars.

By using Progeos GIS enhanced web-based software, a municipality with less than 10,000 people can provide Land, Property, Permit, Code and Request services to all municipal users for under 10,000 dollars a year.

Hosting Services

When municipalities host their own websites, they may be hampered by bandwidth issues, configuration errors and the support of multiple online services. Hosting data through Progeos is reliable, secure and protected.

When municipal employees, residents or businesses create maps using Land Manager, apply for permits using Permit Manager, or start work orders using Request Manager your site will work every time.

Hardware Support

Technology is always evolving: servers become more reliable, processors become faster and available storage increases. When users choose Progeos, they ensure that the hardware their services run on is up-to-date and reliable.

Progeos services save municipal dollars in many ways. The municipality does not have to support new hardware for new software or worry about maintaining servers 24 hours a day. When a municipality selects Progeos software they do not have to worry about budgeting new servers every few years. The IT department only has to make sure their Internet connection is working. Progeos takes care of the rest.
